

The **Evolution® Medial-Pivot** is designed to answer the limitations of traditional implants by delivering flexion stability and anatomic motion through a wear-limiting design; resulting in superior outcomes compared to traditional knee replacements.

Medial-Pivot has been at the core of our total and revision knees since 1998.

Our second-generation Evolution® Medial-Pivot was launched in 2010 and we have the most cited and clinically supported medially stabilized knee on the market.
