Improvement in handover accuracy

60%
Improvement in data capture

42.5%
Improvement of bed utilisation

> "
> *The system is very easy to use and gives clear, immediate benefits for patient safety, practice efficiency, compliance with data protection legislation and communication between all members of the trauma team...Excellent communication between clinical and administrative staff to ensure safe follow-up, easy and secure off-site access to help prepare the day's work in advance*
> *Exemplary support by a committed and knowledgeable team who take pride in providing effective solutions and customisation very quickly*

Ian McLean
Consultant Orthopaedic Surgeon
Trainer of the Year 2020, West of Scotland Orthopaedic Training Scheme
NHS Forth Valley

£1,500,000
Cost savings in reduced inpatients stay

- 27 Hours
per month of clinicians times saved

0 Data Loss
Improved governance within the Trust

Maximum visibility with real time tracking of the trauma inpatient flow

Complete trauma list coordination and theatres planning

Robust digital audit trail of the patient pathway for governance

Customisation of pathways to streamline orthopaedic patient cases

eTrauma Core

More targeted service provision and staff training with granular data analytics

eTrauma VFC

Full feedback loop for referrers including rejected referrals

eTrauma Virtual Platform

Customisation of pathways to streamline orthopaedic patient cases

Protocol pathways are automatically provided for specific conditions with leaflet generation for patients

Better communication with outcome notes between departments and between patients

Referral to assessment time are tracked to govern the admin process

Coded data capture
SNOMED CT coding enables a significant proportion of the required **BPT** data to be captured and time-stamped automatically

Security
The eTrauma platform is fully compliant with NHS digital information governance requirements, including GDPR.

4 Weeks
Full system deployment in the hospital

Patient Safety & Satisfaction
eTrauma provides a safe and secure environment to store patient data and share information between doctors.

No more complaints, patients know where they are in the pathway of their care

eTrauma Interoperability
In accordance with NHS data interoperability requirements eTrauma has both HL7 v2.x and FHIR approved endpoints that connect with any existing eMR/ePR systems.
