

Pitch-Patch

Tissue reinforcement for rotator cuff repair

Why Pitch-Patch?

- The **Pitch-Patch** is intended to be used for reinforcement of the rotator cuff following or during repair by suture or suture anchors, where weakness exists in the soft tissue.
- The **Pitch-Patch** has a warp knitted structure that allows a natural body response whereby native tissue integrates into the device.
- The **Pitch-Patch** can be implanted using open or arthroscopic techniques, designed by surgeons for surgeons.
- **Pitch-Patch**; “patch augmentation in massive RC reconstruction leads to a substantially lower re-tear rate.” ^[1]
- Shaped to fit the anatomy the **Pitch-Patch** features a reinforced border and incorporates reinforced, prepared holes for the sutures.
- Available in two sizes to accommodate varying patient anatomy, different tear sizes and quality of tissue.
